DETAILED ACTION

Response to Amendment

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.
2. Claims 1-12 and 15 are pending and have been examined.

Terminal Disclaimer

3. The terminal disclaimer does not comply with 37 CFR 1.321(b) and/or (c) because: An attorney or agent, not of record, is not authorized to sign a terminal disclaimer in the capacity as an attorney or agent acting in a representative capacity as provided by 37 CFR 1.34 (a). See 37 CFR 1.321(b) and/or (c).

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to

be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claim 1 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,075,859. Although the conflicting claims are not identical, they are not patentably distinct from each other because claim 1 of US Patent 6,075,859 contains every element of claims 1 of the instant application and as such anticipates claim 1 of the instant application.
6. Claim 15 rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,075,859 in view of claim 1 of US Patent 6,768,797.

Claim 1 of 6,075,859 teaches the limitations recited by claim 15 of the instant application of: first encoding one of said set of message signals in accordance with a first keyed transformation, second encoding one of said set of message signals in accordance with a self-inverting transformation in which at least one of said message signals is altered (reads on the third encoding step of 6,075,859), third encoding one of said set of message signals in accordance with a second keyed transformation, wherein said second keyed transformation is the inverse of said first keyed transformation (reads on the second encoding step of 6,075,859), wherein the first and the third encoding is performed in accordance with a table, and wherein the first and third encoding are

performed in alternating directions (reads on the use of an inverse keyed transformation recited by claim 1 of US 6,075,859). US Patent 6,075,859 does not teach the generation of a table that is formed by strict permutation. However US Patent 6,768,797 does teach this feature in its claim 1. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have incorporated this table feature of claim 1 of US Patent 6,768,797, into the method of transforming data recited by claim 1 of US Patent 6,075,859. It would have been desirable to do so since the CMEA protocol uses a table in its substitution box encryption and use of such a table formed by strict permutation would increase the security of the system by increasing the difficulty in the cryptanalysis of it.

Allowable Subject Matter

7. Claims 2-12 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
